

Stocks

Concepts

- Creating and deploying a servlet
- HttpServletResponse: addIntHeader method
- Random class
- NumberFormat, Locale: formatting currency

Requirements

- Make a web application that displays stock quotes for some corporations
- The page should automatically refresh every three seconds (add a header to the response to specify the refresh frequency)
- To simulate the stock market's random variation, use the Random class to generate random stock prices within the range of 50 – 100
- Use NumberFormat to format the stock prices for the US Locale

Stock Prices

Oracle: \$86.15

Microsoft: \$96.34

Google: \$79.28
