# Date

## Concepts

- Creating and deploying a servlet
- HttpServletResponse: addIntHeader method
- LocalDateTime
- DateTimeFormatter

## Requirements

- Make a web application that displays the current date and current time
- The page should automatically refresh every one second (add a header to the response to specify the refresh frequency)
- First display the LocalDateTime directly
- Then use two DateTimeFormatters to apply a custom formatting for the date and time

## LocalDateTime without formatting

Current time: 2022-07-04T19:58:52.585385600

## LocalDateTime with formatting using DateTimeFormatter

Current date: 2022/07/04

Current time: 07:54:02 p.m.
